- Privacy is tricky (examples)
- Formalise setting
- Understanding privacy
- Define privacy
- Attacking privacy
- What did we miss?

# Dutch elections

Dutch ballot:

1. CDA	...	18. SGP
1-1. X <input type="checkbox"/>	...	18-1. X' <input type="checkbox"/>
⋮	⋮	⋮
1-13. Y <input type="checkbox"/>		18-13. Y' <input type="checkbox"/>
⋮	⋮	
1-45. Z <input type="checkbox"/>	...	

**Parties:** CDA, VVD, PvdA, SP, Groenlinks, Wilders, LPF, Christenunie, SGP, ...

Introduction

---

Privacy = tricky

-Dutch elections

Wrapping up

---

- Privacy is more than “for whom you voted”.

# Luxembourgian elections

Luxembourgian ballot:

1. ADR	...	7. KPL
1-1. J. Henckes <input type="checkbox"/> <input type="checkbox"/>	...	7-1. P. Back <input type="checkbox"/> <input type="checkbox"/>
⋮	⋮	⋮
1-21. F. Zeutzius <input type="checkbox"/> <input type="checkbox"/>	...	7-21. M. Tani <input type="checkbox"/> <input type="checkbox"/>

# Luxembourgian elections

Luxembourgian ballot:

1. ADR	...	7. KPL
1-1. J. Henckes <input type="checkbox"/> <input type="checkbox"/>	...	7-1. P. Back <input type="checkbox"/> <input type="checkbox"/>
⋮	⋮	⋮
1-21. F. Zeutzius <input type="checkbox"/> <input type="checkbox"/>	...	7-21. M. Tani <input type="checkbox"/> <input type="checkbox"/>

- voter marks 21 boxes.

# Luxembourgian elections

Luxembourgian ballot:

1. ADR	...	7. KPL
1-1. J. Henckes <input checked="" type="checkbox"/> <input checked="" type="checkbox"/>	...	7-1. P. Back <input type="checkbox"/> <input type="checkbox"/>
⋮	⋮	⋮
1-21. F. Zeutzius <input type="checkbox"/> <input type="checkbox"/>	...	7-21. M. Tani <input type="checkbox"/> <input type="checkbox"/>

■ voter marks 21 boxes.

# Luxembourgian elections

Luxembourgian ballot:

1. ADR	...	7. KPL
1-1. J. Henckes <input checked="" type="checkbox"/> <input checked="" type="checkbox"/>	...	7-1. P. Back <input type="checkbox"/> <input type="checkbox"/>
⋮	⋮	⋮
1-21. F. Zeutzius <input type="checkbox"/> <input type="checkbox"/>	...	7-21. M. Tani <input type="checkbox"/> <input type="checkbox"/>

- voter marks 21 boxes.
- pick 2. That leaves  $\binom{292}{19} = 314,269,098,408,967,151,724,980,483,800$  ways to fill in ballot.

Wrapping up

**choice group**  $cg_v$ :

contains all candidates, that a voter  $v$  might have chosen.

**choice group**  $cg_v$ :

contains all candidates, that a voter  $v$  might have chosen.

**Example:**

$\mathcal{C} = \{Vike - Freiberga, Balkenende, Juncker\}$ .

■ results: Balkenende 0 votes

$\implies \forall v \in \mathcal{V}: cg_v(\mathcal{VS}) = \{Juncker, Vike - Freiberga\}$ .

■  $v$  voted for a man

$\implies cg_v(\mathcal{VS}) = \{Balkenende, Juncker\}$ .

# conspiring voters

Wrapping up

## Indistinguishability:

a series of events  $t$  is indistinguishable from a series  $t'$  if  
“the intruder cannot distinguish them”.

## Indistinguishability:

a series of events  $t$  is indistinguishable from a series  $t'$  if  
 “the intruder cannot distinguish them”.

## Example:

- Encryption:  $\{c\}_k \sim \{c'\}_k$ , if the intruder does not know  $k$ .
- Nonces:  $\{n\}_k \sim \{n'\}_k$ , always.

## Terms:

$$\varphi ::= \text{var} \in \text{Vars} \mid c \in \mathcal{C} \mid n \in \text{Nonces} \mid k \mid (\varphi_1, \varphi_2) \mid \{\varphi\}_k.$$

- voters  $v \in \mathcal{V}$
- choice function  $\gamma: \mathcal{V} \rightarrow \mathcal{C}$
- $\text{vc} \in \text{Vars}$ : voter's choice

 & us(a, a', \varphi), \quad ur(a, a', \varphi), \\
 & \quad ph(i) \\
 & | a, a' \in Agents, \varphi \in Terms, i \in \mathbb{N} \}.
 \end{aligned}$$

## Event order:

$$P ::= \delta \mid ev.P \mid P_1 + P_2 \mid P_1 \triangleleft \varphi_1 = \varphi_2 \triangleright P_2 \mid ev.X(\varphi_1, \dots, \varphi_n)$$

**Definition 1 (voting system)** A voting system  $\mathcal{VS} \in \text{VotSys}$  specifies the state of each agent:

$$\text{VotSys} = \text{Agents} \rightarrow (\mathcal{P}(\text{Terms}) \times \text{Processes}).$$

Specifying choice:

$$\mathcal{VS}^\gamma(a) = \begin{cases} \mathcal{VS}(a) & \text{if } a \notin \mathcal{V} \\ (\pi_1(\mathcal{VS}(a)), \sigma_a(\pi_2(\mathcal{VS}(a)))) & \text{if } a \in \mathcal{V} \end{cases}$$

where  $\sigma_a = \text{vc} \mapsto \gamma(a)$ .

When can the intruder distinguish  $Tr(\mathcal{VS}^{\gamma_1})$  from  $Tr(\mathcal{VS}^{\gamma_2})$ ?

When he can **reinterpret**  $t$  as  $t'$ .

**Definition 2 (reinterpretation (GHPR05))** *Let  $\rho$  be a permutation on the set of terms  $Terms$  and let  $K_I$  be a knowledge set. The map  $\rho$  is a semi-reinterpretation under  $K_I$  if it satisfies the following.*

$$\rho(p) = p, \text{ for } p \in \mathcal{C} \cup Keys$$

$$\rho((\varphi_1, \varphi_2)) = (\rho(\varphi_1), \rho(\varphi_2))$$

$$\rho(\{\varphi\}_k) = \{\rho(\varphi)\}_k, \text{ if } K_I \vdash \varphi, k \vee K_I \vdash \{\varphi\}_k, k^{-1}$$

*Map  $\rho$  is a reinterpretation under  $K_I$  iff it is a semi-reinterpretation and its inverse  $\rho^{-1}$  is a semi-reinterpretation under  $\rho(K_I)$ .*

The choice group for a voting system  $\mathcal{VS}$  and a choice function  $\gamma$  is given by

$$cg(\mathcal{VS}, \gamma) = \{\gamma' \mid \gamma \simeq_{\mathcal{VS}} \gamma'\}.$$

The choice group for a particular voter  $v$ , i.e. the set of candidates indistinguishable from  $v$ 's chosen candidate, is given by

$$cg_v(\mathcal{VS}, \gamma) = \{\gamma'(v) \mid \gamma' \in cg(\mathcal{VS}, \gamma)\}.$$
